SUMMARY

BTech graduate with hands-on experience building and deploying automated data pipelines on GCP — including a live production pipeline ingesting 7,500+ records daily across 30 equities, automated via GitHub Actions and Cloud Scheduler. Proven ability to operate in high-stakes, people-facing environments — secured a corporate sponsorship from Altium by independently leading outreach to 30–50 companies. Actively seeking a data engineering role where rigour and initiative create real impact.

EDUCATION

SRM Institute of Science and Technology

Bachelor of Technology in Electronics and Communication

Sep 2022 – May 2026

Chennai, India

LEADERSHIP & EXPERIENCE

Corporate Relations & Sponsorship Lead

Team Robocon SRM

Sep 2023 – Feb 2025

Chennai, India

- Led end-to-end corporate outreach for SRM's competitive robotics team, independently approaching 30–50 companies to secure sponsorships in monetary and in-kind form.
- Closed a partnership with Altium — a globally recognised PCB design software company — securing complimentary software licences for the team, demonstrating ability to negotiate and deliver results with real corporate stakeholders.
- Built and managed an outreach pipeline, crafting pitch materials and managing follow-up cadences across multiple companies simultaneously under tight competition deadlines.

TECHNICAL SKILLS

Programming: Python (Data Preprocessing, Automation), SQL

Data Engineering: ETL Pipeline Design, Data Modeling, Schema Normalization, Data Validation, Workflow Orchestration

Cloud & Big Data: GCP (Cloud Storage, BigQuery, Looker Studio), Apache Spark (PySpark), Apache Airflow

Databases: SQLite, BigQuery — relational design, query optimisation, schema normalisation

Libraries & Tools: Pandas, NumPy, scikit-learn, Matplotlib, Git, GitHub, Jupyter, Linux

PROJECTS

Stock Market Data Pipeline | *Python, PySpark, Apache Airflow, GCP*

2026

- Built and deployed a fully automated end-to-end batch data pipeline on GCP — ingesting daily OHLCV data for 30+ equities (7,500+ records/run) via Cloud Functions into GCS, with zero-touch daily ingestion triggered by Cloud Scheduler.
- Transformed raw market data computing 5+ derived metrics (7-day/30-day rolling averages, volatility scores, daily returns) with deduplication and null handling, loading validated data into BigQuery for analysis.
- Visualised price trends and volatility across 30 equities in an interactive Looker Studio dashboard; automated end-to-end via GitHub Actions CI/CD running daily at 9am IST. github.com/advaitsdev/stock-market-pipeline

Retail Data Pipeline & Analysis | *Python, SQL, SQLite*

2024

- Designed and implemented a modular ETL pipeline ingesting multi-source datasets into a normalised relational schema, processing 10,000+ structured records with automated join consistency validation across shipment, product, and transaction data.
- Built schema validation and data integrity checks ensuring consistent cross-dataset joins; implemented reusable transformation modules enabling new data sources to be onboarded with minimal rework.

CERTIFICATIONS & VIRTUAL EXPERIENCE

Walmart Software Engineering Virtual Experience

2024

Forage

- Designed relational database schemas and implemented Python-SQLite pipelines; solved open-ended data structuring problems with incomplete information, applying structured judgment to produce scalable solutions.
