SUMMARY

Data Engineering fresher with hands-on experience building and deploying production-grade ETL/ELT pipelines on GCP. Shipped a live batch pipeline ingesting 7,500+ records daily across 30 equities using Cloud Functions, BigQuery, Cloud Storage, and Cloud Scheduler — automated end-to-end via GitHub Actions CI/CD. Proficient in Python, SQL, data modelling, schema normalisation, data quality validation, and workflow orchestration. Seeking a data engineering or analytics engineering role to build reliable data infrastructure at scale.

EDUCATION

SRM Institute of Science and Technology

Sep 2022 – May 2026

B.Tech in Electronics and Communication Engineering

Chennai, India

TECHNICAL SKILLS

Languages: Python, SQL

Data Engineering: ETL/ELT Pipelines, Batch Ingestion, Data Modelling, Schema Normalisation, Data Quality & Validation, Incremental Loads, Deduplication, Workflow Orchestration

Cloud & Infrastructure: GCP (BigQuery, Cloud Functions, Cloud Storage, Cloud Scheduler, Looker Studio), GitHub Actions CI/CD, REST APIs

Libraries & Tools: Pandas, NumPy, Matplotlib, SQLite, Git, PyTorch, OpenCV, Jupyter, Linux

PROJECTS

Stock Market Data Pipeline | *Python, GCP, BigQuery, Cloud Functions, GitHub Actions*

2025 – Present

- Designed and deployed a fully automated batch ETL pipeline on GCP — extracting daily OHLCV data for 30+ equities (7,500+ records/run) via REST API in Cloud Functions, landing raw data in Cloud Storage, and loading validated records into BigQuery for downstream analysis.
- Built a transformation layer computing 5+ derived metrics (7-day/30-day rolling averages, daily returns, volatility scores) with deduplication logic and null-handling checks to enforce data quality on every incremental load.
- Automated end-to-end via Cloud Scheduler and GitHub Actions CI/CD; published live Looker Studio dashboard visualising price trends and volatility across 30 equities from BigQuery.
github.com/advaitsdev/stock-market-pipeline

Colonoscopy Cancer Detection | *Python, PyTorch, OpenCV, CNN, Swin Transformer, YOLO* Jan 2025 – Present

- Developed an AI diagnostic system for colorectal cancer detection on 8,000+ colonoscopy images; designed and trained CNN, Swin Transformer, and YOLO models for lesion detection and classification.
- Built end-to-end preprocessing pipeline (normalisation, augmentation, validation); evaluated models using Accuracy, Precision, Recall, F1-Score, and AUROC using PyTorch on GPU via Google Colab.

EXPERIENCE

Corporate Relations & Sponsorship Lead

Sep 2023 – Feb 2025

Team Robocon SRM

Chennai, India

- Led end-to-end corporate outreach for SRM's competitive robotics team, independently approaching 30–50 companies to secure monetary and in-kind sponsorships under competition deadlines.
- Closed a partnership with Altium (globally recognised PCB design software), securing complimentary licences by negotiating directly with corporate stakeholders; managed multi-company follow-up pipeline simultaneously.

CERTIFICATIONS

Google Data Analytics Certificate | *Google / Coursera — In Progress*

2026

Walmart Software Engineering Virtual Experience | *Forage*

2024

- Designed relational database schemas and built Python-SQLite pipelines; applied structured data modelling judgment to open-ended, real-world data structuring problems.
